METALBEST MODEL ULTRA-TEMP CLASS A

Metalbest Model Ultra-Temp Class A system is ideal for venting residential appliances, burning natural and LP gas, #2 oil, and wood. It's specially designed for today's modern, high efficiency "airtight" wood stoves (solid fuel wood burning fireplaces).

Metalbest has a smooth inner liner that produces rapid stabilization for strong draft and heats fast to minimize condensation as waste gases are exhausted. The outer casing carries structural loads leaving the inner pipe free to expand without stress. Tested to 2100° F, a high temperature test option of Underwriters' Laboratories safety standard for factory built chimneys, UL-103 sixth edition. Heavy duty stainless steel is used for all system components. This lightweight pipe has threaded internal couplers that lock together with an 1/8 turn.
